Spine Center

At OrthoCarolina's Spine Center, our fellowship-trained physicians specialize – and excel – in one area. Nationally recognized for spinal care, we lead the field in research and in the number of procedures performed, including minimally invasive surgery (MIS). Our physician staff, comprised of six dedicated spine surgeons and four physiatrists, is committed to providing the highest level of care to patients suffering from pain, numbness or weakness anywhere from the neck to the lower back. Many of the procedures performed are outpatient procedures, or allow the patient to go home the following morning. Our spectrum of care ranges from nonsurgical management of spinal disorders to the most complex reconstructive procedures for patients with debilitating conditions of the spine. OrthoCarolina Spine Center physicians are recognized leaders in the treatment of complex deformities, tumors, infections, degenerative conditions, nerve impingement and paralysis. They are actively involved in research, including the development of spine implants and bone substitutes and we are instrumental in teaching these latest techniques to other physicians.

Several of our Spine physicians see patients at the central location on Randolph Road, but many are located within other OrthoCarolina offices to provide treatment across the region. At the OrthoCarolina Spine Center, our physicians look forward to treating you with the highest level of professional care.
